PBT WORKS MACHINES WORK WITH VARIOUS CLEANING AGENTS

- ◆ Water based solvents
- ◆ Semi-aqua solvents
- ◆ Saponifiers
- ◆ Detergents

Majority of cleaning processes require dedicated, carefully selected cleaning agent. Cleaning applications demand perfect balance between chemical action and fluid mechanics.

PBT Works cooperates with leading global manufacturers of cleaning chemicals. Our machines are available for trials in several technical centers around the world. Up to date machine design knowledge and latest developments in cleaning chemicals are regularly shared between our engineers and partners to ensure optimal machine-chemical compatibility for the best cleaning results.

Cleaning agents today are sophisticated blends of many substances carrying out the challenging task of diluting wide range of organic residues while not attacking another group of very similar organic materials on assemblies and components.

PBT Works thoroughly tests durability of all potentially sensitive machine components using partners' cleaning agents to ensure long machine lifespan.
